

VERSION DESCRIPTION DOCUMENT

I. Scope: The Version Description Document (VDD) contains information that aids the users in identifying the contents of the software release and instructions for installation. This VDD is applicable to internal and external customers of Defense Finance and Accounting Systems (DFAS) Technology Services Organization Pensacola (TSOPE), and the FASTDATA project in particular.

a. Identification: FASTDATA FA and Site for the Windows® operating system software Release 01-1, Version 01-1.

b. Purpose: To modify FA and Site software according to the System Change Requests (SCR's) summarized as follows:

SCR: X0145-00 Title: DISPLAY AMENDED DOCUMENT AFTER ENTRY

Adds ability at the Site to choose whether or not to automatically display a document after it is saved. The option is selected from the Tools Menu. The system will display new, updated and amended documents upon save.

SCR: X0218-00 Title: VIEW RECEIPT AFTER SAVE

Displays immediate effect of adding a receipt or an expenditure upon save. The user does not need to go to the view document screen to see the balance. The program displays the entered values, and recalculates and displays new document costs for all ACRN's. The "Create Another Receipt" message stays on the Receipt screen.

SCR: X0227-00 Title: DISPLAY CUMULATIVE TOTAL AMOUNT ON AMENDMENT

Immediately calculates and displays the CUMULATIVE TOTAL AMOUNT on amendment documents (NC2276, NC2275, and DD448).

SCR: X0228-00 Title: SWITCH BETWEEN SITES

A new menu option provides the capability to switch from one Site to another without logging out and back in again. FA must grant access to Sites and download Site Data to establish the required security.

SCR: X0237-00 Title: PRINT REPORTS IN PORTRAIT MODE

Provides the ability to print reports in portrait mode at the Site.

SCR: X0238-00 Title: OPTION TO PRINT/NOT PRINT NC2276 INSTRUCTION SHEET

When printing a NC2276 or NC2275 source document, the user now has the option to print/not print the Instruction sheet by responding to a messagebox.

SCR: X0239-00 Title: PRINTING SITE STATUS INFORMATION

Several users expressed a need to print the Status of Funds and Serial Range information from the Site Status window. Provide this capability either by expanding the Site Status screen to allow a screen print, or by printing the site status information, status of funds, OPTAR, Authorizations, Job Order Numbers, and Serial Ranges. The system was changed to provide a new report "Financial Framework Report" at the site. The report filter will include but not be limited to RC, OPTAR, Authorization, and JON. The user must have been granted access to print reports in order to view the new report.

Provide the capability to print the Document Status Log by Authorization. The capability is provided through a new report "Document Status Log by Authorization". The filter will include but not be limited to RC, OPTAR, Authorization, and JON. A report provides a subtotal by Authorization, and a page break on RC/OPTAR. The user must

have been granted access to print reports in order to view the new report.

A modification to the system was made to export only RC's that have associated OPTAR's for a Site. This is accomplished through the "Update db" process by deleted RC's that have no associated OPTAR's.

SCR: X0243-00 Title: DUPLICATE OPTAR/AUTH/JON/SERIAL RANGE CHECK

Provide a duplicate check among all the FA's in a Super FA environment, for duplication in OPTAR's, AUTH's, JON's, and Document Serial Ranges. The system produces a warning message when a potential duplicate exists. For Serial Ranges, the user may either save or edit the conflicting new range.

SCR: X0258-00 Title: PREVENT DUPLICATE BUMED 'B1' FILES

The system was modified to prevent duplicate processing of imported 'B1' interface files from BUMED. Batch ID was changed from DMLSSJJJ### to DMLSSBBB (BBB = block). 'B1' and 'B4' (cost transfer) files are processed from the 'IN' folder on the Oracle server as defined by FA-ORACL.SQL. **The DBA should verify that the 'IN' folder is empty PRIOR to executing the FA-ORACL.SQL, as the Oracle database will attempt to process any residual data remaining in the folder.** The 'B1' files are parsed and sent to the respective sites as suspended 'B1' transactions where they are processed via the Utilities - External Interface - Process Suspended Transactions menu option, providing the user a report of any 'B1' transactions that are automatically processed. The Oracle package will not send 'B4' transactions if there are any suspended 'B1' transactions to prevent non-preceded expenditures. To prevent the same 'B4' from processing twice, positions 7-10 of the file name are used as a batch code, a new folder is created within the 'IN' folder with system date and time, and all files successfully processed are move into the appropriate folder.

SCR: X0272-00 Title: SELECTION OF TRANS FOR EXPORT TO SPS

When selecting transactions for export to SPS, those that have contract information are not eligible for export. However there may be contract information on one ACRN of an eligible transaction and not on the other 3 ACRN's (for example) and that makes the other 3 ACRN's eligible for export.

If transaction has a contract that is a DD1155 created in FASTDATA, it is no longer displayed, as this transaction is not eligible for export to SPS.

SCR: X0275-00 Title: MODIFY SPS EXPORT

Corrects specified errors as documented in the 1348-6, 1149 and 2276 export test files. Provides a check at the FA for export sites to ensure that certain fields are present before saving a document, and that the document contains valid entries required for export.

Sets menu security for procurement and credit card reports.

ANSRS was removed as the middleman for formatting Procurement Data to SPS format. Modified menu options and window titles accordingly, changing all occurrences of 'ANSRS' to 'SPS'. Also, made minor modifications to the export file.

Created two new SPS reports at the Site entitled "Procurement Data Reports". One report displays documents that have been exported and will contain Batch ID in the criteria window. The next report displays

documents that have not been exported by SPS and contains Document Type in the criteria window.

SCR: X0277-00 Title: SITE REPORTS FOR RELEASE 01-1

The following items were corrected in the Site software:

1. The Last Amendment number on the Transaction History Report is not updated as amendments are created against a basic document. The amendment number always shows '00'.
2. The Batch Number is truncating when printing the Expenditure Rejection Report from the Process - Reject/Suspend - Expenditure Rejection screen.
3. The OPTAR Log field is bold in the OPTAR Log/Memorandum Record report. No other field in the report is bold.
4. In the Report Criteria for Expenditures Exceeding Variance Report By Document Number, DCN is not tendered. In the Report Criteria for Expenditures Exceeding Variance Report By Batch Number, one has to scroll all the right just to find the Batch Number drop down. Recommend moving the drop down to the first column.
5. Report Criteria for Non-Preceded Expenditures Report By Batch Number - recommend tendering a Batch Number drop down. Report Criteria for Non-Preceded Expenditures Report By DCN - recommend tendering a DCN drop down.
6. Address Report - provide at the Site the same style of printed report for the FASTDATA_FS_ADDRESS table.
7. Correct the verbiage concerning 3-UP on the Site Module reference Help Select Print Format window. Make verbiage more clear concerning 2-UP and 3-UP. If one selects multiple DD1348's to print, it is unclear if one is going to receive a singular document printed twice or separate documents printed on one page. Explain why the selecting of 2-UP or 3-UP on the Select Print Format window unchecks the Laser check box (for the Alps printer only).
8. The nomenclature 'Total for OPTAR line' on the Accounting Transaction Batch report is misleading and causes concern for Sites. If there is an AO, CM and RP for the same document number they are all added to this total. It appears from the report that the OPTAR has been reduced three times instead of once. 'Transaction Total' would be better. Change the report by inserting 'Transaction' before 'Total for OPTAR:' and 'Total for batch:'.
9. Block 12G truncated when printing NC2275.
10. If you use a 6-position address code in the "from" block of the DD448, the address code that prints in the "to" block of the DD448-2 (acceptance) will drop the last position. N00281 becomes N0028.
11. Modify security so user cannot modify document if access is 'X' or 'D'.

SCR: X0280-00 Title: FA REPORTS FOR RELEASE 01-1

The following items were corrected in the FA software:

1. Provide the job order status (filterable) and status descriptions on the Matched and Unmatched JON Reports. Indicate on the Matched JON Report whether the JON was exported to the Site (by status). Explain the significance of "Matched" and "Unmatched" in user documentation.
2. Provide a description of the reason for suspension on the Accounting Transactions Report - Suspended. The reasons are invalid JON, reject manually, automatic suspension rule. (Note: the system is unable to provide the reason for suspension).
3. Provide totals by Site (Quarter 1, 2, 3, 4 and YTD Authorized, Total Cumulative Cost, Encumbered, and Available Balance) on the Site Report. The data values for SAG and SF were transposed on the Site Report. Move the SAG, Function and Subfunction from the Authorization level to the JON level and add Cost Account Code and Chargeable UIC.

4. Change 'Date Sent to CC' to 'Date Sent to Site' in FA Expenditure Download Cross-reference Reports.
5. On the Import Expenditures window and Quick Print report, change the header SDN to DCN.
6. On the FA Expenditure Cost Redistribution Audit Report identify the Site that originated the cost redistribution.
7. Include 'invalid JON' as a reason for suspension on the Expenditure Suspension Report, Expenditures Suspended. Note: Invalid JON already exists as one of the Suspension Reasons for the Column.
8. The Suspended Expenditure Report has a column for Site but the Site is not identified on the report.
9. Add new report to FA on user accesses. Note: Added a new report involving all database users for a site and their security accesses in the SITE and FA.
10. Minor field size changes made to FA Expenditure Download Cross-reference by Site Report

SCR: X0284-00 Title: PERFORMANCE AND QUALITY ENHANCEMENTS 01-1

Various system enhancements were incorporated:

1. When modifying a description on an OPTAR that is associated to a non-windows site, the application is reporting that the OPTAR can only be assigned to a Windows® site. The site code is not changing and the application should allow the update. Note: This correctly occurs when a duplicate check determines that the RC ID of the user does not match the returned RC ID.
2. Allow access to tables, from the helpdesk, to tables that do not contain an FA_ID column.
3. Add a tab to the FA Maintenance window called "Users" to allow viewing only of user ID and database user ID for the active FA.
4. Add a tab to the Site Maintenance window called "Users" to allow viewing only of user ID and database user ID for the active Site.
5. According to PTR P0155, there should be no edit on DO/BPA when user is creating a "D" (Delivery Order) type DD1155 contract. It can be present or not. Currently in the DD1155 contract process, the only type contracts that can have DO/BPA's are "A", "G", "H". The Contract Process (Enter/Update) allows "D" with or without DO/BPA.
6. Modify FTP Process so that the error messagebox no longer appears when the process returns an error from the external process.
7. Change DD448 Line Item report, in the column Estimated Unit Price Column, to allow full viewing of large numbers. Previously, numbers were getting cut off.
8. When an amendment to a DD448 adds a new ACRN and increases the existing ACRN then is subsequently cancelled and reinstated, the system computes an incorrect actual cost throwing funds out-of-balance.
9. Modified the Status of Funds Report at the FA to correctly show encumbered funds (it was multiplying the amount times 4).
10. Add Site ID and FA ID as a header to the report generated after the Import External Transaction process is executed.
11. Unable to export the fourth prior batch from the FA to STARS-FL.
12. An invalid filter expression on the Status of Funds Report caused RC to be set to '01' and OPTAR to 'TC'.
13. There is a delay in processing data with large numbers of rows.
14. Change window titles on Select GSA MILSTRIP and Select GSA PO to include MILSTRIP and PO Document Type.
15. When importing a MPX file containing expenditures, the application is producing an "error accessing external object expend_partial_ind" message.
16. Remove the check for document type on the non preceded expenditure process.
17. Make corrections to the new ACRN process for the non-preceded expenditure process. New ACRN is not saving.

18. Modify FA MPX file so Transfer Indicator is prefixed with the table name for ORACLE.
19. Modify the ACRN window to buffer any blank or null Country Code with 2 spaces.
20. Modify FA Expenditure Cost Redistribution Report to include Site; add title for Distribution control number.
21. Remove trailing spaced from address when checking existence on database to correct a problem with address keys that are 5 or 6 positions.
22. FA Matched JON Report: correct typo on column heading.
23. Fix Transaction Serial ID on the import of site accounting batch from DOS sites.
24. Add message addressing the failure to Import Cost Transfers if error occurs in process.

SCR: X0285-00 Title: CREDIT CARD PROCESSES

Provides a methodology for processing, funds checking and recording credit card purchases, integrating the bankcard-generated 'CC' document with normal document processing. The system provides for both "method of purchase" and "method of payment" uses of the bankcard. The bank 'CC' document can be entered manually or imported (DAASC 'MPC'). Maintains administrative information supporting bankcard processing, including bank ID, credit card numbers, authorized cardholders, and vendor data. Provides bankcard cross-reference report by vendor and credit card number, and a report that links the original document/ACRN to all of its related 'CC' document/ACRN's.

SCR: X0286-00 Title: ERROR WHEN PURGING SUSPENDED TRANSACTIONS

When attempting to purge suspended transactions error message "Data has changed since last retrieval" was returned in both stand-alone and Oracle databases. This occurred when a document has more than one transaction with the same dollar amount. The screen was changed to allow for previously identical transactions to be selected individually.

SCR: X0287-00 Title: CHANGE ASSOCIATED SERIAL RANGES TO NEW SITE

When a user changes the Site that an OPTAR is associated with, all associated Serial Ranges must be changed to the new Site. A warning message must be provided informing the user of this change. An OPTAR may not be deleted if it is used on a Serial Range. The FA maintenance window was changed to re-retrieve OPTAR ID when user changes Sites. Changed message in OPTAR message to include RC/OPTAR/Site values. Site Maintenance now won't allow an OPTAR with assigned serial ranges to be disassociated from site.

SCR: X0288-00 Title: ENHANCE FTP PROCESS

Enhance FTP process to include items for valid and invalid JON's from STARS-FL.

SCR: X0290-00 Title: EXPORT BUTTON NOT HIGHLIGHTED

User reports that the export button is not highlighted after typing in an export path. You must hit the Enter key, push Tab or select Browse in order to get the export button as an option. The same is true for the Migrate program.

SCR: X0291-00 Title: CONTRACT PROCESS/EDIT PROBLEM

Valid Contract Number in DOS (N001999D034) cannot be update in the GUI. The following errors are generated when attempting to update the contract information. "The contract cannot be saved due to the following:"

- 1)Contract(N001999D034) must be thirteen positions.

2)Positions seven and eight(9D) must be numeric.
3)Position nine(0) must be alphabetic(excluding I and O) , 1, 2, 3 or 9.
The system was modified not to validate protected fields.

SCR: X0292-00 Title: PRINT INCOMPLETE ON DD1131

The NAME OF REMITTER and DETAILED DESCRIPTION fields of the DD1131 were expanded to display/print the largest possible amount of data in the respective fields.

SCR: X0293-00 Title: NO COST TRAVEL TRANSACTIONS

The system was changed to allow users to enter a no cost (zero amount) travel memo record (NAVPERS 1320/16 and DD1610 memo) using the FASTDATA software.

SCR: X0294-00 Title: FUNDS NOT ADJUSTED WHEN AMENDMENT IS CANCELLED

1. Funds are adjusted properly when an amendment is cancelled. The Display Document Summary and the Actual Cost reflected on the reports was not reflecting the correct amounts. Modifications were made to the database views that collect document costs.

2. Modifications were made to the database views that collect document costs such that cancelled amendments are not used in the actual cost of any amendable documents.

This corrected the following scenario:

1. Created 448 with ACRN AA.
 2. Created Amendment '01' with increase to AA and add ACRN AB.
 3. Canceled Amendment '01'.
 4. Create amendment with increase to AA and AB.
 5. Actual cost for AB is incorrect and funds are out of balance.
3. A change was made in the site conversion that will only execute the "reflected as" message on the recalculate obligations screen if it occurs during the conversion or migration process. This corrected the following problem: After cancellation of 2276 commitment and reinstating the 2276 with a manual expenditure, creating an amendment to the 2276 caused the database to be out of balance. Recalculate obligations made the adjustment but the adjustment remarks remained part of the recalculate obligations message the next time recalculate was processed.

SCR: X0295-00 Title: EXPORT ACCTG TRANS RPT/ ACCTG TRANS BATCH RPT

The users on Oracle with automatic uploads and downloads will not receive an "Exported Accounting Transaction Report". The developers cited the "Accounting Transaction Batch Report" as a substitute report. These two reports may not agree when both reports are for the same batch number. The batch report seems to reflect the current status of the document rather than the actual transactions that were exported to the FA.

Documentation shows a document exported to the FA, then cancelled and exported to the FA in a separate batch. The document is not displayed on the Exported Accounting Transaction Batch Report and therefore does not reflect the actual transactions exported in each batch. The Accounting Transaction Batch Report was changed to allow the viewing of a document that was created in one batch and then cancelled in another. It now appears in both reports viewable as if the export had just occurred.

SCR: X0296-00 Title: DATABASE OUT OF BALANCE IN CONTRACT PROCESS

The edit function in Contract Process caused the database to go out of balance when changing the P/F indicator of the contract from Final to Partial. The program was corrected to correctly calculate costs keeping funds in balance

SCR: X0300-00 Title: VALID SITE NO USERS EXPORT ABORTS

An error resulted upon FA export to Site when no users were associated to the Site. The program was changed to generate a messagebox to inform the user that the site must have users in order to export. The export does not execute in this case.

SCR: X0302-00 Title: CHANGE EXPRESS PURCHASE TO INBOUND INTERFACE

Changed 'Express Purchase' to 'Inbound Interface' in the import external transactions selection box and on the Inbound Transaction Report.

SCR: X0303-00 Title: SHOW MPX FILENAME IN IMPORT WINDOW

The system was changed to display the .MPX file name when selecting a file for import or export.

SCR: X0307-00 Title: CANNOT CHECK "EXPORT TO SITE" ON JOB ORDER SCREEN

The system was corrected to allow further editing of the job order under the following circumstance. After the user created a new JON and unchecked "Export to Site" then exported financial framework to the site, the user could not check the "Export to Site".

SCR: X0308-00 Title: NEW 510 RECORDS FROM EXTERNAL INTERFACE

When importing or creating (inserting) a new travel record through the External Interface process and the travel portion is ACRN AB with execution code 510, 'Display Document' shows the amount for ACRN AB as \$.00. Funds are in balance and records and reports display the correct amount.

The Site external interface process, for N 510 transactions for travel and miscellaneous 'MD' documents, created an 'AO' in the same amount and stored the obligation amount.

SCR: X0309-00 Title: CR EXPENDITURE, INVALID JON, ALLOW REPROCESS

With release 00-2 any rejected expenditure with a credit amount was excluded from the Cost Redistribution process. The system was changed to allow the reprocessing of a credit expenditure with an invalid JON once the JON is fully established. The expenditure is displayed on the "Select Expenditure to Correct" window and may be "Reprocessed" or associated to another JON.

SCR: X0310-00 Title: CORRECT EXPENDITURE LIST/DATE PROBLEM

Currently with the new FA 00-2, once an expenditure is corrected with a JON differing from the incoming record, the expenditure remains on the initial selection screen until exported to the Site. For FA's with large amounts of data this could be confusing.

The expenditure is now flagged as "Corrected" and appears on the Select Expenditure to Correct window. This is sufficient to inform the user of its status prior to export to the Site. The original expenditure is available for correction until exported to the Site. The system now removes the expenditure from the Select Expenditure to Correct window once it is exported to the Site.

When a corrected expenditure was rejected by the Site and imported into the FA, the Processed Date displayed as January 1, 1900 on the Select Expenditure to Correct window.

SCR: X0311-00 Title: STA00 SORT ORDER FOR AMOUNT TYPE CODE

To stabilize the testing environment between Oracle and Sybase, the sort order for record type and amount type was changed for the STARS/FL accounting transaction batch (STA00). The system was changed to sort record types (within 915,540,510) as follows: N, L, T, P, Q, R, and U,

and sort transactions by amount type descending (D's then C's) within DCN/ACRN.

SCR: X0312-00 Title: NUMERIC ACRN

One is allowed to create a purely numeric ACRN by adding a new ACRN on a Non-proceeded expenditure. Normally the ACRN edits will not allow a purely numeric ACRN. STARS edits were changed about a year ago to:

1st position of ACRN can be 0-9 or A-Z

2nd position of ACRN can be 0-9 or A-Z

Traditionally the ACRN is alpha. For years data processors tried to avoid 'I' and 'O' for obvious reasons. The FASTDATA programs were modified to accept all alphanumerics in ACRN.

SCR: X0313-00 Title: SELECT REDISTRIBUTED EXPD TO VIEW AMOUNT FIELD

The Amount is dropping cents on the Select Redistributed Expenditure to View window. The field was changed to a currency field.

SCR: X0314-00 Title: CONTRACTOR CODE ON 1155

The Contractor Code in block 9 of DD1155 and SF30 can be a CAGE code and was expanded from 3 to 6 positions. The Facility Code in the same block relates to the DUNS number was expanded to from 6 to 13 positions to accommodate a DUNS or DUNS+4 number. The field may not be 10-12 positions.

SCR: X0315-00 Title: FIELD LENGTH REQUIREMENT FOR SDN UIC

One can create or modify a one to five position value for the SDN UIC field on the Serial Range window whereas five positions should be the required length for SDN UIC. The new serial range window was changed to make this field modifiable after export.

SCR: X0316-00 Title: ORACLE - COUNTRY CODE NULL ABORT

Within ORACLE, a Country-Code that is null is not implicitly converted to spaces as within Sybase. The system was changed to explicitly convert a null Country Code to spaces when the dB in use is ORACLE.

SCR: X0317-00 Title: 1348-6 PRINTING - PRIORITY INFORMATION

A print problem in release software 00-2C and 01-1 was mishandling the printing of Priority block (position 60 and 61). The printing of DD1348-6 was corrected to not display the first position of the priority code.

SCR: X0318-00 Title: UNABLE TO CONTRACT AMEND AFTER EXPENDITURE

Corrected the amendment process to change the basic document status to C or A if finalized. This allows the amendment to be contracted and corrects the following problem:

1. Created source NC2276 with 2 ACRN's and prior to export, cancelled both ACRN's.

2. Created final expenditure for both ACRN's and this action reinstated the document.

3. Created Amendment '01' for both ACRN's.

Was unable to enter contract information on Amendment '01'.

SCR: X0319-00 Title: CANNOT REDIST EXP TO DCN WITH 'I' OR 'O' IN SERIAL RANGE

The user could not redistribute an expenditure to a DCN with an 'I' or 'O' in the serial range portion of the DCN. Removed edit for 'I' or 'O' in serial range in the validate DCN function of the DCN selection window.

SCR: X0320-00 Title: FTP PROCESS

Corrected the FTP process to force FTP session to end after the send or receive command. Command to use is '@echo QUIT.'

SCR: X0321-00 Title: QUARTERS CHANGE AFTER IMPORTING

After importing the outyear into the site, when you returned to the current fiscal year at the site, the database did not return to the correct quarter. This had an impact on the funds available at the site for the current fiscal year. The MPX process was setting Quarter on imports and installs, though it should only set quarter on site install. This was removed for normal imports.

SCR: X0328-00 Title: PROCESS IMPORT JON FILES FROM STARS CONTAIN SPACES

The import JON from STARS/FL process was changed to allow the processing of JON import file, from STARS, that contain spaces within the JON in the file. Currently process will handle both forms of the file.

SCR: X0329-00 Title: RECORD CONTRACT INFO ONLY ON CONTRACTABLE DOCS

The Site import external transaction process was corrected, when contract information is input against a non-contractable type document, to ignore the contract information and related contract logic.

SCR: X0330-00 Title: ADJUSTING 1149 ZEROED OUT BY INSERT

In the Site import external transactions (insert transaction) process, a 'T' (adjustment) record type transaction (except for 510's) was sent to the FA as space. In the FA, a 540 against the basic document (amendment 00) with a space record type was being translated to an 'N' (new). The Site import external transaction process was changed to send 'T' transactions (except for 510) as 'T' instead of space, which remains a 'T' when exported to STARS.

SCR: X0331-00 Title: UNPROTECT ENDING SERIAL RANGE FOR DEACTIVATED & CONFIRMED

When the FA deactivated a serial range and received the confirmation back from the site, the Ending Serial Range was not enabled and unprotected. This did not allow the user to reset the ending range to one greater than the last used (or one greater than the beginning if the range was never used), so the numbers could be reused in another range.

Before the error message did not display if ending serial was equal to last used. Ending serial must be one greater than last used or one greater than beginning if the range was never used.

SCR: X0336-00 Title: ALLOW CREDIT ACRN'S ON CIVILIAN LABOR DOCUMENTS

With labor accelerations, the user needed the ability to record credit ACRN'S on civilian labor documents. This allows the total labor to be recorded along with a credit for the accelerated benefits. Examples

DCN #1	
Total Labor (ACRN AA, JON 1):	80.00
Benefits (ACRN AB JON 1):	20.00
Cost of civilian labor document:	100.00
DCN #2	
Benefits (ACRN AA JON 2):	-20.00
Net result of two documents:	80.00
DCN #1	
Total Labor (ACRN AA, JON 1):	100.00
Benefits (ACRN AB JON 2):	-20.00
Cost of civilian labor document:	80.00

Removed the validation on the civilian labor ACRN requiring the amount to date to be greater than zero.

SCR: X0337-00 Title: ALLOW SUSPENSION BASED ON SERIAL PORTION OF THE JON

The system was changed to allow the user to suspend accounting transactions and expenditures at the FA based on various combinations of the serial portion of the job order number. The user should have the ability to create a suspension rule based on any combination of the serial portion of the job order number.

Examples:

Suspend all transactions with the last position of the job order equal to 'A'.

Suspend all expenditures with the first position of the job order equal to '1' and the last position of the job order equal to 'A'.

Suspend all transactions with the last position of the job order equal to 'A', or 'B'.

Added the English description and the filter expression to the expenditure rules and accounting transactions to allow the user to filter on any portion of the serial portion of the job order.

SCR: X0338-00 Title: ALLOW 915 T ON THE INBOUND INTERFACE

The system was changed to allow a 915 T to be imported through the inbound interface. This ability is only allowed for NC2275, NC2276, DD1149 or DD1348-6 documents recorded as memorandum documents. Source documents are not allowed as they can be adjusted through the application either through the amendment process or the correction after export. This allows an adjustment to be recorded against a document that can not be amended, as all inbound transactions are recorded as memorandum records.

SCR: X0339-00 Title: NON-PRECEDED ACRN EXPEND WILL SUSPEND

When an expenditure from STARS processed at the Site and found no match, it creates a non-preceded expenditure. Subsequent expenditures for the same DCN but different ACRN's suspended with message "ACRN mismatch". Corrected MPX process to add a non-preceded ACRN if the document exists and is non-preceded.

SCR: X0340-00 Title: RESET SECURITY DOES NOT WORK FOR DOS SITES

Reset Security did not work for DOS sites. AC20 and AC30 files contained new/old password vice new password/high values. The upload indicator had to be reset to '0' in order for the ac20 and ac30 to write correctly.

SCR: X0343-00 Title: IMPORT 540 "T" TRANSACTION FOR 448

Importing a 540 'T' adjusting transaction for a DD448 will reject as 'no matching obligation'. The obligation on file was recorded as an 'AR' (Category '1' DD448 denoting acceptance of reimbursable order). The adjusting 540 'T' was imported as an 'AO' transaction code causing a mismatch.

The import process was changed to determine the imported transaction code based on the transaction on file ('AO', or for DD448's, 'AR' or 'AD'). Contract amount is updated for 540 'T' DD448 with 'AD' transaction code. Obligation amount is updated for 540 'T' DD448 with 'AR' transaction code (Category '2' DD448 contract). The program also rejects if a 540 'T' for 'AR' document type does not match a commitment 'CM'.

SCR: X0353-00 Title: AC60 EXPORT FILE SORT ORDER INCORRECT

AC60 records must be sorted by OPTAR vice RC. This only effects DOS Sites that have multiple RC's. The program was changed to sort by OPTAR first, then RC, rather than RC then OPTAR.

SCR: X0355-00 Title: FUNDS AVAIL INCORRECT WHEN LARGE EXP PROCESSED

When an expenditure with large dollar value was processed, reducing funds available to a minimal amount, an amendment to the document that was within the available funds rejected with the message "Funds Not Available". The application was corrected to properly calculate the cost adjustment to amended documents by comparing document cost prior to and after the amendment, and using the difference for funds checking.

SCR: X0356-00 Title: ADJUST DMLSS OBL/RCPT FOR COST TRANSFERS

The system was modified to process BUMED DMLSS FA transactions that adjust the obligation/receipt amounts for cost transfers, where an expenditure was recorded against a document created through the inbound interface. The software processes these transactions and performs no validations against the current document cost and does not adjust funds, because the transfer and actual expenditure still dictate the document costs.

Release 01-1 is a maintenance release for the FA and Site containing the SCR's listed above. It is provided as a full INSTALL release for new users and for those who have already downloaded Release 00-2, 00-2A, 00-2B, or 00-2C.

The initial FA Release 98-01 migrated the functionality in the FASTDATA Fund Administrator COBOL based Pacbase to Windows® PowerBuilder. Release 98-01 was followed by PATCH releases 98-1A, 98-1B, and 98-1C. Release 99-01 followed with two PATCH releases 99-1A and 99-1B. Finally, Release 00-2 for both FA and Site was implemented followed by three PATCH release 00-2A, 00-2B, and 00-2C. For FA customers already using FASTDATA FA Windows® software, Release 00-2, 00-2A, 00-2B or 00-2C must be installed prior to Release 01-1.

The initial Site Release 00-1 migrated the functionality in the FASTDATA Fund Administrator COBOL based Pacbase to Windows® PowerBuilder. Release 00-1 was followed by PATCH releases 00-1A, 00-1B and 00-1C. Finally, Release 00-2 for both FA and Site was implemented followed by three PATCH release 00-2A, 00-2B, and 00-2C. For Site customers already using FASTDATA Site Windows® software, Release 00-2, 00-2A, 00-2B, or 00-2C must be installed prior to Release 01-1.

If this is your initial installation of Windows® FASTDATA, begin with Release 01-1, which is a full INSTALL release. Please refer to the FASTDATA web site at <http://navweb.secnav.navy.mil/fastdata> for a full description of all FD releases. FASTDATA for the Windows® operating system runs in a Client-Server environment. The system uses a database engine and is fully ODBC-compliant. The software can be run in a PC stand-alone environment or any number of LAN configurations.

II. References: FASTDATA Software Configuration Management Plan and Release Management procedures.

III. Version Description:

a. Inventory of Materials Released: FASTDATA FA and Site software is available at the FASTDATA Internet web site as a single self-extracting executable file that can be written to CD ROM or a hard drive. The Internet web site is: <http://navweb.secnav.navy.mil/fastdata>.

b. Inventory of Software/Firmware Released: See SCR Detail by Release Report File from CMIS for a list of programs. The SCR Detail by Release Report File from CMIS is provided at our Internet web site.

c. Enhancements to Functionality: See SCR Detail by Release Report File for enhancements to functionality at our Internet web site. A description of each SCR included in the release is available in the Release Notes option of the Help Menu.

d. Maintenance to Product: Programs were modified in PowerBuilder, created in PVCS build dated 12APR01, unit tested, and the System Integration Test (SIT) was completed.

e. Adaptation Data: No change.

f. Interface Compatibility: The Standard Procurement System (SPS) interface was modified to remove ANSRS as a middleman under SCR X0275.

g. Documentation: Revised documentation is available at our Internet web site.

h. Computer Based Training: CBT is available to guide the user through the FASTDATA FA module. CBT files and installation instructions may be downloaded from our Internet web site. Please note that CBT training material is not current at this time. Future enhancements to CBT software are pending.

IV. Installation Instructions:

a. Installation overview: The following are new installation instructions for Release 01-1, Version 01-1, a full INSTALL release of the FASTDATA software.

1. The FA FASTDATA software is installed to the fd-gui directory and therefore has no impact to the Site module. The Site FASTDATA software is installed to the fd-site directory and likewise has no impact to the FA module.

2. There are two sets of installation instructions: one for a standalone configuration and one for server configuration. If your activity is using a server configuration, you will not install Release 01-1 on your computer. A network or local area network (LAN) administrator will perform a server installation.

b. Complete installation instructions are available in Chapter 2 and Appendix F of the FASTDATA Fund Administrator User's Manual, and Chapter 2 and Appendix E of the Site User's Manual. The User Manuals are available at the FASTDATA Web Site.

V. Uninstall Instructions:

a. Uninstall overview: The uninstall feature is no longer available. If you want to remove the Windows® FASTDATA FA or Site from your system, simply delete FASTDATA files from affected directories and paths.

VI. Conversion: Refer to the FA and Site User Manual, Chapter 2 for information on converting your current DOS data. Job orders will be converted when an upgrade to Release 01-1 is installed or upon conversion from the DOS-based version of FASTDATA to the Windows® version, Release 01-1.

VII. Completion of Testing:

a. Unit Testing completed by JR Bont, 12 APR 2001.

b. SIT testing completed by Anthony Coker 12 APR 2001.

VIII. Possible Problems, Known Anomalies, and Work-around:

- a. SCR X0210, prior Release 00-2, created a new FA - Site interface file format with an 'mpx' extension. The interface requires that the FA ID values for the FA and Sites match. If Site FA ID's do not match the FA, please contact the FASTDATA Helpdesk prior to installing Release 00-2 or 01-1. The Database User ID established in the FA software is exported to the Site with Site Passwords or Installation. The Database User ID will overlay the existing Database User ID in the Site and the user will be required to use the new Database User ID value upon logon. **Please note: Beginning with Release 01-1, FA and Site Windows® software must be installed at the same time to ensure compatible FA and Site 'mpx' interface files and database updates.**
- b. The Job Order (implemented in prior Release 00-2, SCR's X0006 and X0088) and Cost Redistribution (also Release 00-2, SCR's X0008 and X0198) interfaces with STARS/FL are now available. Please contact your OPLOC to set up the required STARS/FL file transfer datasets. The Cost Redistribution, Correct Suspended Expenditure and Return Expenditure to FA processes are powerful tools intended for very limited usage. It is recommended that responsibility be designated to only one individual per Site.

IX. Notes: Authority given by Gary Naumann, Program Manager at ASN(FM&C), by verbal approval on 12 APR 2001, to implement this release.

X. Appendices: None.

XI. Signed-off: All products represented in the VDD have successfully completed testing and are ready for delivery to customers.

Name	Title	Date
Ron Smith	FA Team Leader	12 APR 2001
Jack Barton	Site Team Leader	12 APR 2001
